MobiFin Tapestry

Building FinTech, simplified

Compose, not code, financial products

Build

MobiFin

Workflow template

As financial services become integral to digital journeys, every business can now launch financial products. Yet building them remains slow, complex, and costly—constrained by rigid development, developer bottlenecks, and fragmented, non-reusable FinTech logic.

Enter Tapestry

An AI-powered composable orchestration platform purpose-built for digital finance. Tapestry enables you to rapidly create, configure and launch financial products in days—with the power of AI, without any code.

The platform capabilities include:

Prebuilt FinTech templates
Offers configurable workflows for key use cases—BNPL, wallets, microlending, and more—built on two decades of FinTech expertise.

AI-powered workflow generation
Tapestry's Ai assembles workflows from natural language prompts, applies business logic, and orchestrates instantly without code.

Low-code workflow automation
A visual, drag-and-drop builder enables business teams with hands-on control to manually assemble and refine workflows.

Composable FinTech primitives
Plug-and-play blocks such as interest and limits that are reusable across products to accelerate innovation agility.

Dynamic API orchestration
Lets users import openAPIs, compose flows, test in a sandbox, and expose as secure, embeddable APIs with complete lifecycle controls.

Multi-tenant architecture
Configure once, deploy and scale across entities, segments, and regions with tenant-specific logic, granular access, and unified governance.

What makes Tapestry unique?

Purpose-built for FinTech:
Not generic—fuses AI with domain intelligence, orchestration, and extensibility.

Composable and reusable:
Workflows, APIs, and templates are all modular and built for reuse.

Open and flexible:
Bring your own APIs, build around your stack—no lock-in.

Business + Developer friendly:
Business teams can launch; developers can extend.

The Tapestry advantage:

- Launch FinTech products in days, not months.
- Empower business users while reducing engineering load by up to 70%.
- Eliminate rework and duplication with reusable logic and components.
- Scale innovation across use cases, segments, and channels.
- Maintain full control with stack flexibility and interoperability.
- De-risk product launches with sandbox testing and iterative rollout.

Who is Tapestry for?

Banks, FinTechs, and NBFCs

DigiTechs and SuperApps

PSPs and Aggregators

Retailers and SMEs

Telcos

Government agencies

Who we are

MobiFin is an AI-powered, blockchain-enabled digital finance platform that helps banks, fintechs, telcos, credit unions, and digitechs deliver next-gen financial experiences.

Founded two decades ago, MobiFin provides a robust foundation for modern financial products and platforms—spanning banking, payments, lending, embedded finance, and transaction processing. Today, more than 150 organizations across the world rely on MobiFin to power seamless, secure financial services.

Reimagine FinTech with MobiFin Tapestry.
AI-powered, composable, and scalable.
